

EARN EXECUTIVE

List of technical documents

issued by
P Bryant
March 31, 1989

The Technical EARN Documents are held in LISTSERV at FRMOP11. These are held in Script and non Script formats.

There are two documents:

NODETAGS
NADGUIDE

Other candidates for inclusion are:

The document defining TEDs which came to EXEC

The document defining Directives and Recommendations which came to EXEC

The document on Directives and Recommendations for NJE by Eric Thomas
The security paper from Eric Thomas.

The progress made is disappointing. It appears that there are few areas where there is felt to be a need to catalogue and publish papers. I do not share that view as there are many papers tucked away here and there which are vital to the operation of the network. We have the NETSERV and LISTSERV documents for a start. It would be foolish to spend further resources in supporting a scheme which is not going to be used. On the other hand our documentation is unsatisfactory.
